

Please find the information below to help you see the difference between the Standard and Heavy Duty Cargo Door Locks. We cannot recommend one product over the other. However, we have found that most companies storing tools and supplies on construction sites in sea containers or semi-trailers use the Heavy Duty Cargo Door Lock. Additionally we have found that trucking companies typically use the standard Cargo Door Lock and occasionally use the Heavy Duty Cargo Door Lock depending on their personal preference.

Cargo Door Lock (Weight 6 lbs)
Built with 1" and 1.25" tubing having 11 gauge walls
End Plates are 3/16" X 2"

Heavy Duty Cargo Door Lock (Weight 13 lbs)
Built with 2" and 2.5" tubing having 3/16" walls
End Plates are 3/16" X 6"

If ordering multiple units keyed alike, YOUR key code will be kept here in your electronic file and can be matched to ANY of our products in the future.

If ordering the Changeable Combination version, you may set and change your own 4 digit code at any time from the unlocked position.

Our goal is to provide you with the proper insight, information and products to secure your equipment.

Please reply with your confirmed order decision so we may complete its processing and ship immediately.

We look forward to helping you keep your equipment and cargo!
